Prevention Checklist

8 Tips to Stay Safe Online:

1. **Check the URL:** Always ensure the website starts with https:// and the domain name is spelled correctly (e.g., google.com not g00gle.com).
2. **Enable MFA:** Use Multi-Factor Authentication on all academic and social media accounts.
3. **Question Urgency:** If an email creates panic or a "limited time" threat, it’s likely a scam.
4. **Never Share OTPs:** No legitimate bank or university official will ever ask for your OTP over a call or email.
5. **Use Unique Passwords:** Never use the same password for your college portal and your personal email.
6. **Verify via Secondary Channels:** If you get a suspicious request from a "friend," call them to confirm it's actually them.
7. **Keep Software Updated:** Regular security patches protect you from known vulnerabilities.
8. **Report Incidents:** Immediately report any fraud on the National Cyber Crime Portal (**1930** or cybercrime.gov.in).
